

Bitdefender

Bitdefender is the first security vendor to provide scanning offloading on Security Virtual Appliances since 2011 with GravityZone Smart Centralized Scanning. The scanning process is centralized. Instead of protecting each physical or virtual machine individually, it treats the entire environment as a whole.

GravityZone Zero-Day Threat Protection:

Technology employs advanced heuristic methods to detect zero-day threats in real-time. It analyzes application behavior in a sandbox before allowing it to run in the OS, and continues to monitor and control it as long as it is active.

GravityZone Global Protective Network:

Is the largest security delivery infrastructure on the globe. Made up of more than 500 million machines, it is 100 million nodes above the nearest competitor helping us see more threats and enabling us to be better prepared and more proactive in protecting your data.

GravityZone Endpoint Security Tools:

Includes an intelligent security agent that assesses the host machine at installation to self-configure to optimal form, and adapts its behavior according to endpoint accessibility.
